

# Package ‘bivariate’

May 24, 2019

**Title** Bivariate Probability Distributions

**Version** 0.4.1

**Date** 2019-05-24

**License** GPL (>= 2)

**Maintainer** Abby Spurdle <spurdle.a@gmail.com>

**Author** Abby Spurdle

**URL** <https://sites.google.com/site/spurdlea/r>

**Description** Contains convenience functions for constructing, plotting and evaluating bivariate probability distributions, including their probability mass functions, probability density functions and cumulative distribution functions. Supports uniform (discrete and continuous), binomial, Poisson, categorical, normal, bimodal and Dirichlet (trivariate) distributions, and kernel smoothing and empirical cumulative distribution functions.

**Depends** graphics, stats

**Imports** intoo, barsurf, mvtnorm, KernSmooth

**Suggests** probhat, MASS

**NeedsCompilation** no

**Repository** CRAN

**Date/Publication** 2019-05-24 07:50:12 UTC

---

`rd_01_uniform`*Discrete and Continuous Uniform Distributions*

---

### Description

Discrete and continuous uniform distributions.

Refer to the vignette for better examples.

### Usage

```
dubvpmf (a.X, b.X, a.Y, b.Y)
```

```
dubvcdf (a.X, b.X, a.Y, b.Y)
```

```
cubvpdf (a.X, b.X, a.Y, b.Y)
```

```
cubvcdf (a.X, b.X, a.Y, b.Y)
```

### Arguments

`a.X` Numeric scalar, giving the a value of X.

`b.X` Numeric scalar, giving the b value of X.

`a.Y` Numeric scalar, giving the a value of Y.

`b.Y` Numeric scalar, giving the b value of Y.

### Value

Returns functions of the form:

```
function (x, y) = { ... }
```

Where `x` and `y` are integers (discrete case) or numeric vectors (continuous case).

### Examples

```
f = dubvpmf (1, 4, 1, 4)
```

```
f (1, 1)
```

---

rd\_02\_binomial      *Binomial Distributions*

---

**Description**

Binomial distributions.  
Refer to the vignette for better examples.

**Usage**

```
bnbvpmf (p.X, p.Y, n=1)
bnbvcdf (p.X, p.Y, n=1)
```

**Arguments**

p.X	Numeric scalar, giving the probability of the first event.
p.Y	Numeric scalar, giving the probability of the second event.
n	Integer scalar, giving the number of trials.

**Value**

Returns functions of the form:  
function (x, y) = {...}  
Where x and y are integers.

**Examples**

```
f = bnbvpmf (0.5, 0.5, 10)

f (4, 4)
```

---

rd\_03\_poisson      *Poisson Distributions*

---

**Description**

Poisson distributions.  
Refer to the vignette for better examples and references.

**Usage**

```
pbvpmf (lambda.1, lambda.2, lambda.3)
pbvcdf (lambda.1, lambda.2, lambda.3)

pbvpmf.2 (mean.X, mean.Y, cov)
pbvcdf.2 (mean.X, mean.Y, cov)
```

**Arguments**

lambda.1	Integer scalar, giving the first lambda parameter.
lambda.2	Integer scalar, giving the second lambda parameter.
lambda.3	Integer scalar, giving the third lambda parameter.
mean.X	Integer scalar, giving the mean (and variance) of X.
mean.Y	Integer scalar, giving the mean (and variance) of Y.
cov	Integer scalar, giving the covariance of X and Y.

**Value**

Returns functions of the form:

function (x, y) = {...}

Where x and y are integers.

**Examples**

```
f = pbvpmf (10, 10, 0)
```

```
f (4, 4)
```

---

rd\_04\_categorical      *Categorical Distributions*

---

**Description**

Categorical distributions.

Refer to the vignette for better examples.

**Usage**

```
cbvpmf (z)
```

**Arguments**

z	Numeric matrix of probabilities or frequencies, preferably with row and column names.
---	---

**Value**

Returns a function of the form:

function (x, y) = {...}

Where x and y are integers or strings.

**Examples**

```
z = matrix (sample (1:16), 4, 4)
f = cbvpmf (z)

f (1, 1)
```

rd\_05\_normal

*Normal Distributions***Description**

Normal distributions.

Refer to the vignette for better examples.

**Usage**

```
nbvpdf (mean.X, mean.Y, sd.X, sd.Y, cor)
nbvcdf (mean.X, mean.Y, sd.X, sd.Y, cor)

nbvpdf.2 (mean.X, mean.Y, var.X, var.Y, cov)
nbvcdf.2 (mean.X, mean.Y, var.X, var.Y, cov)
```

**Arguments**

mean.X	Numeric scalar, giving the mean of X.
mean.Y	Numeric scalar, giving the mean of Y.
sd.X	Numeric scalar, giving the sd of X.
sd.Y	Numeric scalar, giving the sd of Y.
var.X	Numeric scalar, giving the variance of X.
var.Y	Numeric scalar, giving the variance of Y.
cor	Numeric scalar, giving the correlation of X and Y.
cov	Numeric scalar, giving the correlation of X and Y.

**Value**

Returns functions of the form:

```
function (x, y) = {...}
```

Where x and y are numeric vectors.

**Examples**

```
f = nbvpdf (0, 0, 1, 1, 0)

f (0, 0)
```

**Description**

Bimodal distributions.

Refer to the vignette for better examples.

**Usage**

```
bmbvpdf (mean.X1, mean.Y1, sd.X1, sd.Y1,  
         mean.X2, mean.Y2, sd.X2, sd.Y2)
```

```
bmbvcdf (mean.X1, mean.Y1, sd.X1, sd.Y1,  
         mean.X2, mean.Y2, sd.X2, sd.Y2)
```

```
bmbvpdf.2 (mean.X1, mean.Y1, var.X1, var.Y1,  
          mean.X2, mean.Y2, var.X2, var.Y2)
```

```
bmbvcdf.2 (mean.X1, mean.Y1, var.X1, var.Y1,  
          mean.X2, mean.Y2, var.X2, var.Y2)
```

**Arguments**

mean.X1	Numeric scalar, giving the mean of the first X component.
mean.Y1	Numeric scalar, giving the mean of the first Y component.
sd.X1	Numeric scalar, giving the sd of the first X component.
sd.Y1	Numeric scalar, giving the sd of the first Y component.
var.X1	Numeric scalar, giving the variance of the first X component.
var.Y1	Numeric scalar, giving the variance of the first Y component.
mean.X2	Numeric scalar, giving the mean of the second X component.
mean.Y2	Numeric scalar, giving the mean of the second Y component.
sd.X2	Numeric scalar, giving the variance of the second X component.
sd.Y2	Numeric scalar, giving the variance of the second Y component.
var.X2	Numeric scalar, giving the variance of the second X component.
var.Y2	Numeric scalar, giving the variance of the second Y component.

**Value**

Returns functions of the form:

```
function (x, y) = {...}
```

Where x and y are numeric vectors.

**Examples**

```
f = bmbvpdf (3.5, 0, 1, 1, 6.5, 0, 1, 1)
```

```
f (0, 0)
```

---

rd\_07\_dirichlet

*Trivariate Dirichlet Distributions*

---

**Description**

Trivariate Dirichlet distributions.

Refer to the vignette for better examples.

**Usage**

```
dtvpdf (alpha.1, alpha.2, alpha.3, tol=0.001)
```

**Arguments**

alpha.1	Numeric scalar, giving the first alpha parameter.
alpha.2	Numeric scalar, giving the second alpha parameter.
alpha.3	Numeric scalar, giving the third alpha parameter.
tol	.

**Details**

The alpha parameters should be greater than 0.

The x values should sum to approximately 1 (with an error defined by tol) and be in the interval (0, 1).

**Value**

Returns a function of the form:

```
function (x1, x2, x3, log=FALSE) = {...}
```

Where x1, x2 and x3 are numeric vectors.

**Examples**

```
f = dtvpdf (1, 1, 1)
```

```
f (0.3, 0.3, 0.4)
```

**Description**

Kernel density estimation and empirical cumulative distribution functions.

Refer to the vignette for better examples.

**Usage**

```
kbvpdf (x, y, bw.X, bw.Y)
ebvcdf (x, y)
```

**Arguments**

<code>x</code>	A vector of x values.
<code>y</code>	A vector of y values.
<code>bw.X</code>	Numeric scalar, giving the X bandwidth.
<code>bw.Y</code>	Numeric scalar, giving the Y bandwidth.

**Details**

The `kbvpdf()` function calls the `bkde2D()` function from the `KernSmooth` package.

Refer the `probhat` package for kernel smoothing, more generally.

**Value**

Returns functions of the form:

```
function (x, y) = { ... }
```

Where `x` and `y` are numeric vectors.

**Examples**

```
x = rnorm (20)
y = rnorm (20)
f = ebvcdf (x, y)
```

```
f (0, 0)
```

---

 rd\_09\_print\_method      *Print Method*

---

**Description**

Print method for bv (bivariate) objects.

**Usage**

```
## S3 method for class 'bv'
print(x, ...)
```

**Arguments**

x	A bv object.
...	Other arguments.

**Details**

This method calls the object.summary() function from the intoo package.

**Examples**

```
f = dubvpmf (1, 4, 1, 4)
f
```

---

 rd\_10\_plot\_methods      *Plot Methods*

---

**Description**

Plot methods for bv (bivariate) objects.

**Usage**

```
## S3 method for class 'dubvpmf'
plot(x, use.plot3d=FALSE, xlim, ylim, ..., all=FALSE)
## S3 method for class 'dubvcdf'
plot(x, use.plot3d=FALSE, xlim, ylim, ...)

## S3 method for class 'bnbvpmf'
plot(x, use.plot3d=FALSE, xlim, ylim, ..., all=FALSE)
## S3 method for class 'bnbvvcdf'
plot(x, use.plot3d=FALSE, xlim, ylim, ...)

## S3 method for class 'pbvpmf'
```

```

plot(x, use.plot3d=FALSE, xmax, ymax, ..., all=FALSE)
## S3 method for class 'pbvcdf'
plot(x, use.plot3d=FALSE, xmax, ymax, ...)

## S3 method for class 'cbvpmf'
plot(x, use.plot3d, ...)

## S3 method for class 'cubvpdf'
plot(x, use.plot3d=FALSE, npoints=20, xlim, ylim, ..., all=FALSE)
## S3 method for class 'cubvcdf'
plot(x, use.plot3d=FALSE, npoints=20, xlim, ylim, ...)

## S3 method for class 'nbvpdf'
plot(x, use.plot3d=FALSE, npoints=20, xlim, ylim, ..., all=FALSE)
## S3 method for class 'nbvcdf'
plot(x, use.plot3d=FALSE, npoints=20, xlim, ylim, ...)

## S3 method for class 'bmbvpdf'
plot(x, use.plot3d=FALSE, npoints=20, xlim, ylim, ..., all=FALSE)
## S3 method for class 'bmbvcdf'
plot(x, use.plot3d=FALSE, npoints=20, xlim, ylim, ...)

## S3 method for class 'dtvpdf'
plot(x, use.plot3d=FALSE, npoints=20, log=FALSE, ...)

## S3 method for class 'kbvpdf'
plot(x, use.plot3d=FALSE, npoints=30, xlim, ylim, ...)

## S3 method for class 'ebvcdf'
plot(x, use.plot3d=FALSE, mpoints=30, ...)

```

### Arguments

<code>x</code>	A <code>bv</code> object.
<code>use.plot3d</code>	If false, a 2d plot, or if true, a 3d plot.
<code>npoints</code>	The number of grid points in each direction. Increase for a smoother surface.
<code>mpoints</code>	The max number of points, for plotting as a step function.
<code>xlim</code>	The x range for the plot.
<code>ylim</code>	The y range for the plot.
<code>xmax</code>	The x range max for the plot.
<code>ymax</code>	The y range max for the plot.
<code>log</code>	If true, plot the log density.
<code>all</code>	If true, plot a two by two grid of both the PMF (or PDF) and CDF using both 2d and 3d plots.
<code>...</code>	Other arguments.

**Examples**

```
f = dubvpmf (1, 4, 1, 4)
plot (f)
```

---

rd_11_theme	<i>Theme</i>
-------------	--------------

---

**Description**

Use the bivariate theme.

**Usage**

```
use.bv.theme ()
```

**Details**

The `.onLoad` function (called when the package is loaded) calls this function.

**Examples**

```
use.bv.theme ()
```
