xopen	2
Index	3

xopen	<i>Open a file, directory or URL</i>
-------	--------------------------------------

Description

Open a file, directory or URL, using the local platforms conventions, i.e. associated applications, default programs, etc. This is usually equivalent to double-clicking on the file in the GUI.

Usage

```
xopen(target = NULL, app = NULL, quiet = FALSE, ...)
```

Arguments

target	String, the path or URL to open.
app	Specify the app to open target with, and its arguments, in a character vector. Note that app names are platform dependent.
quiet	Whether to echo the command to the screen, before running it.
...	Additional arguments, not used currently.

Examples

```
xopen("test.R")  
xopen("https://ps.r-lib.org")  
xopen(tempdir())
```
